

2

- B1
- a) combining first bristles of a first bristle type into a first partial group;
 - b) combining second bristles of a second bristle type into a second partial group;
 - c) shaping said first partial group in a surrounding guide of a shaping device to obtain a first cross section corresponding to a first partial cross section of said first partial group in the combined bristle group;
 - d) shaping said second partial group in said surrounding guide of said shaping device to obtain a second cross section corresponding to a second partial cross section of said second partial group in the combined bristle group;
 - e) converging said shaped first and second partial groups while maintaining said first and said second partial cross sections to form a cross section of the combined bristle group; and
 - f) mounting the combined bristle group to the bristle support.

Remarks

This amendment has been made to correct an obvious translation error.
No new matter has been added.

Respectfully submitted,

Paul Vincent

Enclosures:

Amended claim 25 in square-bracketed and underlined form

25. (amended) A method for the production of brushes, the brushes consisting essentially of at least two different types of bristles collected into at least one combined bristle group having a defined cross section and mounted to a [brush] bristle support, the method comprising the steps of:

- a) combining first bristles of a first bristle type into a first partial group;
- b) combining second bristles of a second bristle type into a second partial group;
- c) shaping said first partial group in a surrounding guide of a shaping device to obtain a first cross section corresponding to a first partial cross section of said first partial group in the combined bristle group;
- d) shaping said second partial group in said surrounding guide of said shaping device to obtain a second cross section corresponding to a second partial cross section of said second partial group in the combined bristle group;
- e) converging said shaped first and second partial groups while maintaining said first and said second partial cross sections to form a cross section of the combined bristle group; and
- f) mounting the combined bristle group to the [brush] bristle support.
